EUGENE DISTRICT OFFICE  
FISH CREEK AQUATIC HABITAT RESTORATION PLAN**

**DECISION RECORD DOCUMENTATION AND  
FINDING OF NO SIGNIFICANT IMPACT**

Environmental Assessment No. OR-090-00-22

**FINDING OF NO SIGNIFICANT IMPACT**

The Coast Range Resource Area, Eugene District, Bureau of Land Management, has completed an update of the Aquatic Habitat Restoration Plan and Environmental Assessment for aquatic habitat restoration projects in Fish Creek, Lake Creek Watershed, Siuslaw River Basin, western Lane County, Oregon.

The design features of the Proposed Action and Alternatives are described in the Environmental Assessment OR-090-00-22. Project work would improve the quality of aquatic and riparian habitat in Fish Creek through placement of log and boulder structures and planting of riparian conifers. The Proposed Action is fully consistent with the objectives and restoration recommendations in the Aquatic Conservation Strategy in the Eugene District Resource Management Plan and Record of Decision the Northwest Forest Plan.

Based on extensive experience with similar work in the Lake Creek Basin, in other Oregon coast streams, and evaluation of similar project work in other coastal rivers, no significant adverse impacts are expected to: Flood plains or wetland/riparian areas, wilderness values, cultural resources, prime or unique farmland, wild and scenic rivers, air quality, Native American religious concerns, low income or minority populations, water quality or noxious weeds.

On the basis of information contained in the EA, and all other information available, it has been determined that the Alternatives analyzed will not have significant environmental impacts not already addressed in the Eugene District Resource Management Plan and Record Of Decision, and do not constitute a major Federal action affecting the quality of the human environment. Therefore, an Environmental Impact Statement or supplement to the existing Environmental Impact Statement is not necessary and will not be prepared for this proposal.

**DECISION**

Based on the analysis documented in the Environmental Assessment (EA) OR-090-00-22 and the Finding of No Significant Impact it is my decision to select the Proposed Action. Implementation of this action will result in improvement of aquatic habitat in Fish Creek through riparian vegetation restoration

and placement of habitat structure in Fish Creek. Implementation is to occur in a five to ten year period beginning in 2000. While proposed project sites and actions are listed in the EA, additional site-specific NEPA documents would be prepared for individual projects as needed.

## **DECISION RATIONAL**

The Proposed Action was selected because it best meets the purpose of the action as described in the EA. The Proposed Action provides for the most improvement in aquatic habitat for resident and anadromous aquatic species. Both the No Action Alternative and Alternative 2 provide for an improvement in aquatic habitat but to a lesser extent and over a longer period of time. The Proposed Action is in compliance with the Aquatic Conservation Strategy in the Record of Decision for the Supplemental Environmental Impact Statement for the Northern Spotted Owl, 1994, and with the Eugene District Record of Decision and Resource Management Plan, 1995.

## **CONSULTATION AND COORDINATION**

Pursuant to the Endangered Species Act, formal consultation was completed with the United States Fish and Wildlife Service, with the determination this action would not jeopardize the continued existence of any federally listed terrestrial species known to occur in the vicinity (Biological Opinion, February 11, 2000). Enhancement work proposed in this Plan and EA is consistent with the description and terms and conditions for aquatic habitat restoration activities under the Programmatic Biological Assessment for the Oregon Coast Coho Salmon (July 23, 1999) and Biological Opinion issued by the National Marine Fisheries Service (July 28, 1999, extended 5 June 2000) so no further consultation is required. Prior to beginning on-ground project work all required permits will be obtained and all required sensitive species clearances will be completed. In the event a sensitive species is present, the individual proposed project action may be modified or excluded as required.

No cultural resources have been identified in the actual project action locations.

## **PUBLIC COMMENTS**

Both the EA and preliminary FONSI were advertised on (July 19, 2000) in the Eugene Register-Guard as being available for a 10-day public review period. Copies of the EA and preliminary FONSI were mailed to interested individuals on our mailing list. No comments were received.
